
Modular Glued Flood Tray

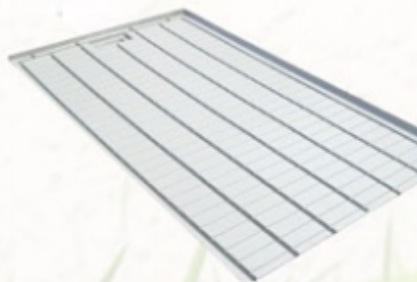

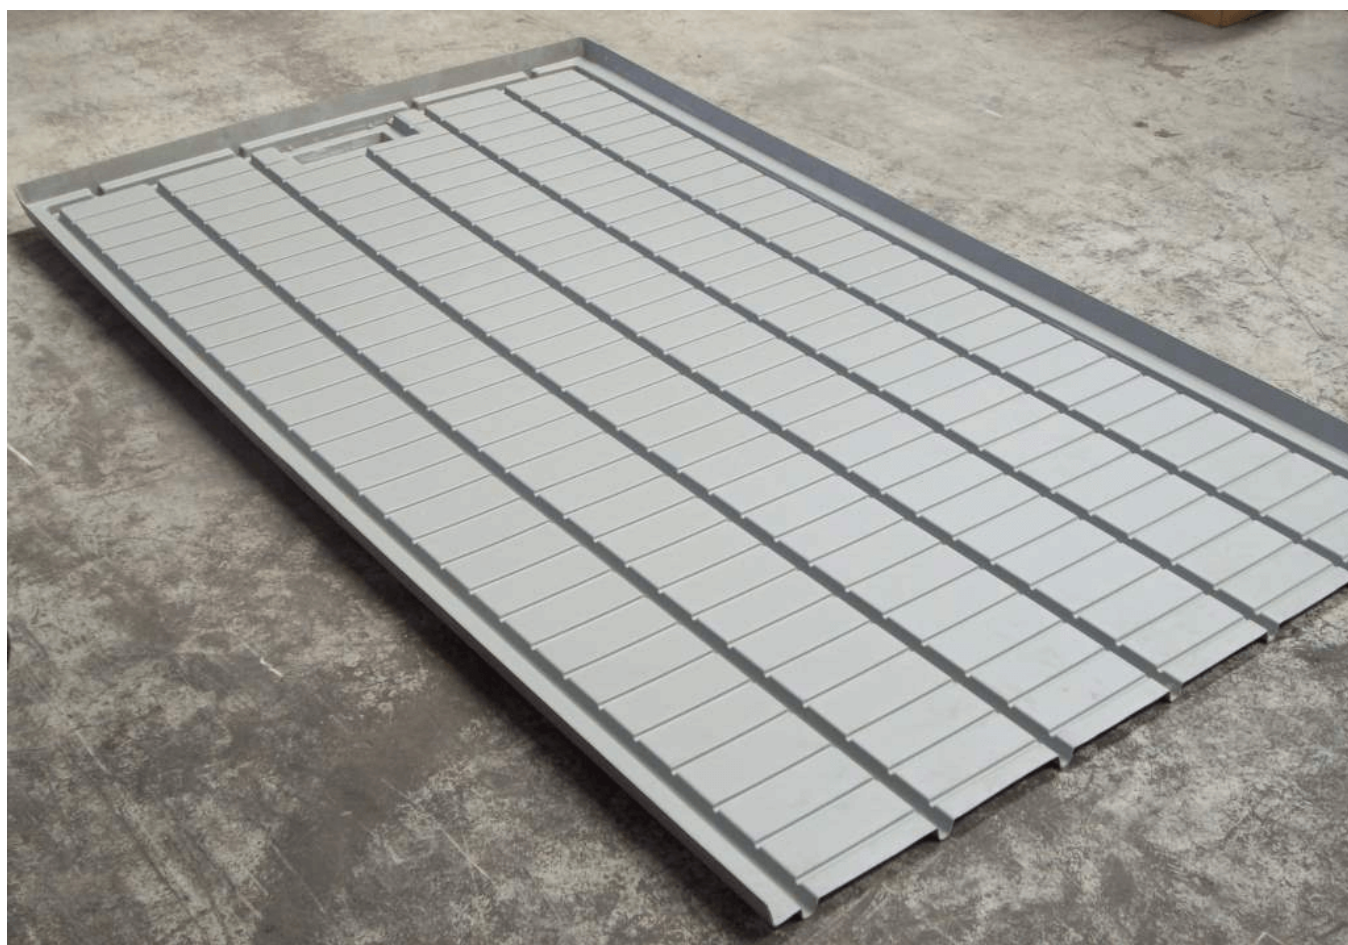

Ebb and Flow Trays are ideal for use with clay grow rock, rockwool or pots filled with a soilless grow substrate. Naturehydro supplies hydroponic modular glued trays from thick, durable, high-impact ABS plastic, which prevents the trays from bowing and sagging under the weight of large plants or full capacity water.

The smooth plastic surface makes it easy to clean the trays, and large drain channels allow water to drain completely away from plants while giving extra structural support to the design.

The following trays are available as 3 sided end plates and 2 sided interconnecting middle plates. These plates can be glued together to make a table of any length. A small division plate can be installed in between the plates to suit any length of table.

Width (mm)	Length (mm)
330	2000
630	2000
915	2000
1220	2000
1500	1500
1600	2000
